

## Homework 3

Software Engineering Principle  
Software Engineering Program,  
Department of Computer Engineering,  
School of Engineering, KMITL

67011287 Ramida Laphasphokin

# Features

## Gantt Chart

Used for planning project plan and tasks duration or deadline.

## Class Diagram

Used for designing classes in the projects.

## Interaction Diagram

Used for designing how classes interact each others in the projects.

## Markdown Renderer for the task assignment page

How it works:

- As mentioned earlier, we can use markdown to express the task,  $\therefore$  we need a markdown renderer.

Implementation Approach:

- Use QEngineWebView Module in PyQt.

## VS-Code Extension (OPTIONAL)

TODO extension in VS-Code with better description for the task and with team member(s) assigned to that task.

How it works:

- If you have comment with TODO in the front, you can add description of the task in a different entry and also in a markdown file.
- If you want to add a person in charge for that task (OPTIONAL), you can use @TEMP, where TEMP can be either role or team member names.
- After saved, you can access the TODO description as you hover and click to inspect task in the comment.

Implementation Approach:

- Scan through the file looking for comment with TODO in the front then keep the entry into the DB.
- We can edit the TODO description inside a external markdown file.

## Page included in this homework

- **Design Page:** Page to brainstorm the program architecture and to adjust tasks duration or deadline.
- **User Settings Page:** Page to edit current user settings.

## Code:

### DesignPageCode.py

```
import sys
from PySide6.QtWidgets import *
from PySide6.QtCore import *
from PySide6.QtGui import *
from DesignPageUI import Ui_Form

class Design(QMainWindow):
    def __init__(self):
        QMainWindow.__init__(self, None)
        self.ui = Ui_Form()
        self.ui.setupUi(self)
        self.ui.class_2.clicked.connect(lambda: self.changePage(0))
        self.ui.GanttChart.clicked.connect(lambda:
            ↪ self.changePage(1))
        self.ui.interaction.clicked.connect(lambda:
            ↪ self.changePage(2))

    def changePage(self, index):
        self.ui.stackedWidget.setCurrentIndex(index)

if __name__ == '__main__':
    app = QApplication(sys.argv)

    w = Design()
    w.show()
    sys.exit(app.exec())
```
